

SYNMAR COOLANT RED -36°C G13 | S500005

Description

Synmar Coolant RED -36°C G13 is a Silicate-containing coolant based on Organic Additive Technology (OAT) which meets the latest requirements of the VAG group VW TL 774J to be used in VAG models from June 2011. Synmar Coolant RED -36°C G13 is ready to use. This coolant is fully backwards compatible with the previous G12++ generation with the exception of heavy duty truck engines.

Please note: due the fact that the product contains glycerol, the readings via a regular refractometer on the MEG-scale will lead to a wrong conclusion regarding the right freeze point. See typical characteristics.

Performance Level

VW TL 774J (G13)

Typicals

Density at 20°C	1.077
Colour	red
Freezing Point 50% diluted	-36
Refractometer Reading 50% diluted	-42
